Education

University of Arizona Tucson, AZ

Bachelor of Science in Computer Science *Aug. 2023 – May 2027*

- **Honors:** Dean's List Full Time, Academic Year Distinction, Hack Arizona '25 Winner
- **Certifications:** AMD AI Agents: Building AI Agents with MCP and Open-Source Inference, AMD AI Agents: Design to Deployment (Multi-Agent Systems)

Experience

Software Developer Dec. 2025 – Present

University Information Technology Services *Tucson, AZ*

- Centralized reagent management for 12 labs by architecting a LIMS platform with iLab to handle 400+ products including inventory, service request, and costing workflows.
- Reduced UI latency by 25% and automated processing across 100+ files by building Django REST APIs and Vue.js interfaces for laboratory workflows.
- Cut development setup time by 50% by containerizing application and MariaDB services with Docker, improving environment consistency.

Software Developer Apr. 2025 – Dec. 2025

BIO5 Research Institute *Tucson, AZ*

- Developed tooling around Clarity LIMS using Python and Django to automate sample routing, workflow stages, queues, and laboratory results processing.
- Shipped and maintained Rails and Django/Vue applications supporting 300+ researchers and staff across BIO5 research facilities.
- Resolved 30% of tracked application bugs across internal research systems by debugging backend workflows, APIs, and frontend components.

Projects

AI DevOps Cloud Agent | GitHub | *Python, Groq API, Docker, Codex* Jun. 2025 – Present

- Built a Python DevOps CLI using Typer, Rich, and Docker Compose to analyze Next.js repositories, generate container configurations, and validate deployments through HTTP readiness checks.
- Built a supervised scan-analyze-propose-approve-execute-validate workflow with bounded repairs, rollback, secret redaction, audit journals, and process timeouts; validated across 181 automated tests and Docker smoke tests.
- Integrated Groq-hosted LLM diagnostics with structured JSON outputs and evidence references while keeping action selection deterministic and approval-gated.

AgenticMarketplace | GitHub | *Next.js, Supabase, PostgreSQL, Vercel, Gemini, Codex* Mar. 2026

- Led a team of 4 to build an AI-assisted B2B marketplace with contract generation, negotiation, and transaction workflows.
- Developed a trust-scoring pipeline using transaction history, dispute rates, and behavioral signals to assess marketplace counterparties.
- Built authenticated messaging, deal-state tracking, and milestone workflows backed by Supabase.

SwipeBite | *Next.js, React, Supabase, Python, ML, Google Places API* Dec. 2025

- Built a full-stack restaurant discovery platform using swipe-based interactions to capture user preferences and deliver personalized restaurant recommendations.
- Developed an ML recommendation pipeline ranking restaurants using user behavior, preferences, and restaurant attributes.
- Integrated Google Places API and Supabase authentication to ingest restaurant data and persist personalized preferences across devices.

Technical Skills

Languages: Python | JavaScript/TypeScript | Java | Ruby
Frameworks: Django | Vue.js | React | Next.js | Node.js | Ruby on Rails
Data/Infrastructure: PostgreSQL | MariaDB/MySQL | Supabase | Docker | AWS | CI/CD | Linux
