Education

University of Arizona Tucson, AZ
Bachelor of Science in Computer Science *Aug. 2023 – May 2027*
Honors: Dean's List Full Time, Academic Year Distinction, Hack Arizona 25 Winner

Experience

Software Developer Dec. 2025 – Present
Univerisity Information Technology Services *Tucson, AZ*
- Automated data processing using Python scripts, reducing manual reporting by 20% across 100+ files
- Built Vue components integrated with Django APIs, improving load efficiency and reducing UI latency by 25%
- Managed Docker environments across projects, reducing setup time by 50% and ensuring environment consistency

Software Developer Apr. 2025 – Dec. 2025
BIO5 Research Institute *Tucson, AZ*
- Stabilized full-stack systems by resolving issues across Rails and Django/Vue applications, supporting 300+ users
- Improved application reliability by refactoring backend workflows and enhancing UI, reducing bugs by 30%
- Debugged a cross-teamed JavaScript application, resolving issues in data loading, routing, and state management

Software Development Teaching Assistant Jan. 2025 – Jun. 2025
University of Arizona *Tucson, AZ*
- Provided support to 150+ students improving their comprehension of key Java concepts
- Led tutoring and group lab sessions resulting in an increase of average exam scores by 20%
- Collaborated with a team of 9 other Teaching Assitants to evaluate and grade assignments and exams

Projects

AI DevOps Cloud Agent | *Python, OpenAI SDK, Docker, GitHub API, AWS, Git* Jun. 2025 – Present
- Built a DevOps agent that analyzes repositories to infer runtime requirements, services, and infrastructure
- Automated Docker Compose and CI/CD workflow generation with runtime validation, health checks, and logs
- Integrated GitHub and AWS to provision infrastructure, deploy applications, and automate cloud deployments
- Implemented an LLM-driven observe, plan, act, validate feedback loop for autonomous deployment and self-healing.

AgenticMarketplace | *Next.js, Supabase, PostgreSQL, Vercel, Git* Mar. 2026
- Led team of 4 to build an AI-assisted B2B marketplace enabling secure transactions between buyers and suppliers
- Implemented a deal lifecycle with contract generation, negotiation workflows, and escrow-backed payments
- Developed an AI-driven trust scoring system analyzing transaction data, dispute rates, and behavioral signals
- Built messaging and milestone tracking to monitor deal progress and reduce fraud through verifiable updates

SwipeBite | *Next.js, React, Supabase, Python, ML, Google Places API, Git* Dec. 2025
- Engineered a Tinder-style interaction food discovery platform for personalized restaurant recommendations
- Applied a ML-driven recommendation pipeline ranking restaurants based on its attributes and user preference
- Integrated Google Places API to ingest real-time restaurant metadata, ratings, and geospatial information
- Built secure authentication and cross-device session handling using Supabase for persistent user preferences

Technical Skills

Languages: Bash | HTML/CSS | Java | JavaScript | MIPS | Python | Ruby | SQL (Postgres)
Frameworks/Databases: Bootstrap | Express.js | Firebase | JavaFX | MongoDB | Next.js | Node.js | React | Ruby on Rails | Supabase
Tools/Technologies: Azure DevOps | Confluence | Docker | Eclipse | Excel | Git | GitHub | Google Cloud Platform | JUnit | Microsoft Teams | Notion | SSH | Unix CLI | Vercel | VS Code
Concepts: AGILE Workflows | Asynchronous Programming | Back-End | Code Reviews | Dev/Prod Environments | Front-End | Full-Stack | Hosting | MVC Architecture | Object-Oriented Programming | Pair Programming | Prompt Engineering | Pull Requests | Refactor Parties | Sprints | Technical Documentation | Test-Driven Development
